

Remote System (Monitoring/Maintenance)

Equipment monitoring system through the Internet

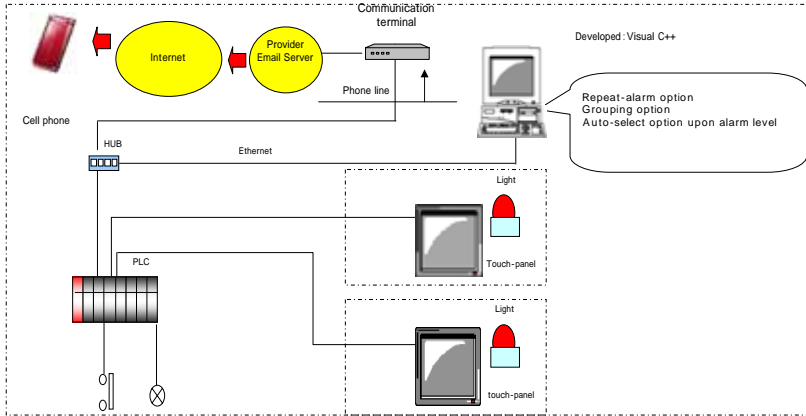

Alarm system to send a notice of equipment-trouble to individual cell phone and PC

Please contact us even for a system with general-purpose equipments, as well as a custom-made system.

(1) . Alarm E-mailing System

Send alarm messages with options such as repeat, grouping, auto-select of receivers depending on the alarm level.

Example of custom-made alarm system:

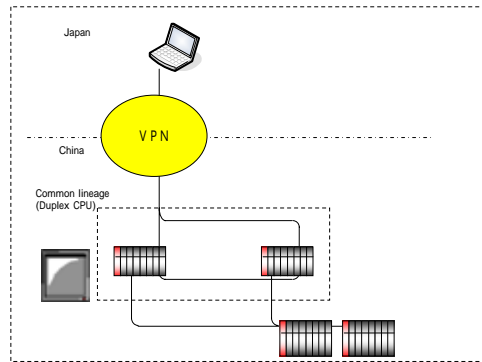

(2) . Remote Maintenance with VPN

VPN is a service that allows to use public lines as if private lines.

It is often used for company's internal network between different locations,

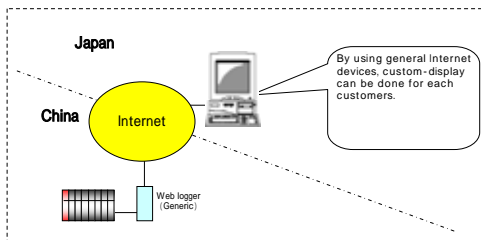

and is less expensive than setting up a private lines.

(3) . Remote Monitoring through the Internet

Monitor equipments in distance using the Internet.

Using general Internet devices allows a custom-display to individual customers.

(4) . Web Server Function

Add a web server function and monitor equipments at browsers.
